Veracode Static Analysis

"We've looked at the results and we've definitely noticed the savings."

Oleg Pasichnyk
Chief Financial Officer,
SOC Prime

SOC Prime is the pioneer and a leader for Detection as a Code, delivering Continuous Security Intelligence as a Service to 5,500+ organizations worldwide. SOC Prime helps security practitioners make threat detection easier, advance security analytics, and provide capabilities for proactive threat hunting. Its key mission is to help organizations build their security operations and procedures by taking a proactive cybersecurity approach to smooth out the transition from a reactive to proactive strategy.

Challenge

SOC Prime realized that to keep up with its competitors and bring new, innovative products to market, it needed a third-party vendor offering security solutions that would be in sync with its development tools, enable source code testing, and aid its transition to DevSecOps. SOC Prime also wanted a SaaS-based vendor that could help it meet industry regulations.

Solution

- Easy to start and scale.
- Rapid risk reduction.
- Comprehensive DevSecOps integration.
- On-demand reporting.

Results

- Gained compliance with industry regulations.
- Shifted AppSec to the development phase, reducing time to market for deployments.
- Eliminated maintenance and server fees by employing a SaaS-based vendor.
- Increased customer trust with on-demand reporting.
