

Veracode EASM + DAST Integrated Solution

See Your Attack Surface. Secure What Matters Most.

Veracode's integrated EASM and DAST solution is an automated security platform designed to continuously discover, monitor, and test your entire external attack surface – providing complete visibility and protection from internet-facing vulnerabilities.

Veracode EASM + DAST provides a seamless, fully automated solution that enhances security posture, simplifies vulnerability management, reduces blind spots across your digital ecosystem, and accelerates secure development – all while maintaining the speed of modern DevOps.

Organizations struggle to secure rapidly expanding digital footprints while maintaining development velocity. Traditional approaches using disconnected discovery and testing tools create visibility gaps, operational silos, and delayed remediation leaving critical vulnerabilities exposed. Security teams need integrated intelligence that scales with modern cloud and DevOps environments.

KEY USE CASES & BENEFITS

Discover Unknown Assets: Automatically identify 50-100% more internet-facing assets including web apps, APIs, and cloud exposures – eliminating dangerous blind spots.

Test at DevOps Speed: Seamlessly transition from discovery to testing with one-click DAST scans, reducing time-to-remediation by 40%.

Prioritize Critical Risks: Focus resources on what matters with risk-based prioritization that maps attacker paths to your high-value assets.

Accelerate Compliance: Support regulated industries with automated scanning and reporting for GDPR, HIPAA, ISO 27001, and other standards.

3X

Veracode research shows **external attack surfaces expanded by 3X in 2024**, with 70% of breaches exploiting unknown or untested web applications.

Why Veracode DAST?

- **Comprehensive Asset Discovery:** Identify and monitor all internet-facing assets with AI-driven discovery that finds hidden and forgotten exposures.
- **Integrated Security Testing:** Seamlessly flow discovered assets into dynamic testing workflows without switching platforms or contexts.
- **Risk-Based Prioritization:** Focus on critical vulnerabilities with intelligent scoring based on exposure, exploitability, and business impact.
- **Unified Security Intelligence:** Single platform view of your external attack surface with consolidated reporting and remediation tracking.
- **DevSecOps Ready:** Integrate into CI/CD pipelines with automated scanning that scales to hundreds of applications simultaneously.

Veracode EASM + DAST empowers enterprises to eliminate attack surface blind spots and secure their digital ecosystem with unprecedented speed and accuracy.

TECHNICAL SPECS

Supported Technologies:

- Web Applications (All frameworks)
- REST/SOAP/GraphQL APIs
- Single Page Applications (SPAs)
- Mobile App Backends
- Microservices Architectures
- Cloud-Native Applications

Discovery Methods:

- DNS Enumeration
- Certificate Transparency
- IP Range Analysis
- Cloud Service Detection
- Third-Party Integration Discovery

Scanning Capabilities:

- OWASP Top 10 Coverage
- API Security Testing
- Authentication Testing
- Business Logic Flaws
- 1000+ Vulnerability Checks

KEY FEATURES

- ✓ **Continuous Attack Surface Monitoring:** Automatically discovers and tracks changes to internet-facing assets with real-time updates and historical tracking.
- ✓ **One-Click Security Testing:** Transition discovered assets directly to DAST scanning with customizable depth — from 3-minute quick scans to comprehensive assessments.
- ✓ **Advanced Risk Analytics:** Prioritize findings based on asset criticality, exposure level, and potential business impact with customizable risk scoring.
- ✓ **Unified Platform Experience:** Access discovery, testing, and remediation workflows from a single interface with role-based dashboards for security and development teams.
- ✓ **Automated Compliance Reporting:** Generate audit-ready reports demonstrating continuous monitoring and testing of external assets for regulatory requirements.
- ✓ **Developer-Friendly Integration:** Provide actionable remediation guidance with low false positives, integrated ticketing, and CI/CD pipeline support.
- ✓ **Enterprise Scale Performance:** Scan hundreds of applications simultaneously with parallel processing and intelligent scheduling to match development cycles.

How It Works

DISCOVERS

Continuously identifies all internet-facing assets including unknown and shadow IT.

PRIORITIZES

Risk-scores assets based on exposure and criticality to focus security efforts.

TESTS

Automatically scans high-risk assets for vulnerabilities with integrated DAST.

Get Started Today

Contact us today to learn more about how Veracode EASM + DAST can help you gain complete visibility and control over your external attack surface. Visit Veracode.com to schedule a demo or request additional information.
